MLS Laser Therapy

When a physical condition or injury affects your pet's mobility or quality of life, there is one goal: A rapid return to every-day activities. Our Clinic is proud to be on the medical technological forefront by offering MLS Laser Therapy. We have invested in the very best technology as a key component of our continuing quest to offer you the finest in health care for your pet!

Laser therapy is a non-invasive, drug-free alternative for managing pain. MLS Laser therapy has been cleared by the FDA for use in both the Veterinary and Medical fields. It is proven safe and effective for treating many debilitating pain conditions. And there are no known side-effects!

MLS Laser Therapy uses specific wavelengths of light that have a strong anti-inflammatory, anti-edema effect on tissues that are exposed to the laser. Painful conditions accompanied by swelling or inflammation benefit from this technology. Photons of laser energy penetrate deeply into tissue and accelerate cellular reproduction and growth. As a result of exposure to the MLS Laser, the cells of tendons, ligaments and muscles repair themselves faster. As inflammation is reduced pain subsides very quickly. In simple terms, laser energy kick-starts the healing process, thereby speeding recovery.

Get your loved one back to pain-free health more quickly with MLS Laser Therapy!

This option now available at Cypress View Veterinary Clinic! Contact us today to find out how to incorporate this to help maintain the health and wellness of your pet.
